ITML605: Robotics and Computer Vision

Course Project

Dr. Alauddin Al-Omary

You require to investigate and implement a project in computer vision. The following topics could help you in the project:

1- Road lane detection
2- Pedestrian detection
3- Edge detection
4- Image segmentation
5- Vehicle counting and classification.
6- People counting tool
7- Colors detection
8- Object tracking in videos
9- Hand gesture recognition
10- Human emotion recognition
11- Business card scanner
12- License plate recognition
13- Handwritten digit recognition
14- Iris flowers classification
15- Family photo face detection
16- Face mask detection
17- Traffic light detection
18- Face detection
19- Arabic scene Description
20- 3-D reconstruction
21- Face Analysis
22- Deep fake detection
23- Image thresholding

Requirements

1- Report that explains the project objectives, tool used and snapshot of implementing and testing the project (10 Marks) as below:
    a. Idea 2 Marks
    b. Implementation 2 marks
    c. Tools used 2 Marks
    d. Testing and validation 2 marks
    e. Results and conclusion 2 Marks

2- Presentation, demo and Q&A (5 Marks)
3- Submission links will be created in Black Board and similarities check should be done (allowed 15% or below)

Evaluation:

Submission deadline: 22-4-2026

Presentation Time: 29-4-2026
